AIR PURIFIER

OptiAir 203 M

Air pollution is a big problem today and if we can not influence on the quality of the outdoor air, we can take care of the clean air in our house, apartment, office ...

Air cleaner Gorenje cleans up to 99.9% of undesirable particles from the air. The multi-stage filter removes unpleasant smell, bacteria and

dust.

A breath of clean air makes us feel better and that has an affect on our productivity. Air purifier should use especially people with respiratory problems, and dust allergies. The appliance removes chemically unwanted particles, viruses, pet hair and allergens.

Timer

The timer ensures the purifier will switch off automatically (1-2-4-8 hours), notifying you with a sound alarm.

LED indicator

LED indicators enable a better overview of the purifier's operation.

Filter cleaning indicator

After 720 hours of operation, a light indicates the need to clean the filter. When the purifier operates at the highest level of ventilation, the warning appears after 480 hours.

Silent operation

The purifier's operation is almost completely silent and non-disruptive for the user, only 25 dB.

4-stages ventilator

Air purifier has 4 fan speeds (low, medium, high, turbo).

HEPA filter

The HEPA filter eliminates up to 99.95% of particles from the air, including pollen and mite excrement.

Hepa filter

Filtration:

- **Prefilter**
The prefilter captures larger dust particles, pet hair and other allergens in the air.
- **HEPA filter**
The hepa filter of high density eliminates up to 99.95% of particles from the air, including pollen and mite excrement, which is essential for those suffering from asthma or allergies. All air sucked in by the purifier goes through the hepa filter where dust and dirt particles are retained by the filter fibres and kept there.
- **Antibacterial filtering**
With the use of the appliance, there will be less bacteria in the room, which has positive affect on health and well-being.
- **Odour filtration**
The purified air is not only clean, but also without unpleasant smells.
- **Active carbon filter**
Carbon filters contain hundreds of active carbon granules that are heat treated and create a network of small channels that successfully retain unwanted parts.
- **Ionizer**
The ionizer emits an electric charge to dust particles, which are then filtered out.
